Re: New Timing Data Stream

One Daytona Blvd.
Daytona Beach, FL 32114
P: +1 (386) 310-6500

IMSA is pleased to announce the addition of the AI Kamel V2 Protocol. This protocol offers a more robust and dynamic data set with the ability to start late and recover from an outage or disconnection while still receiving all the data from the current session. The V2 Protocol also offers a cloud-based solution giving remote staff access to live timing data as if they were at the track. Please see document below for additional information. The current IMSA Enhanced RMon data feed is still available at the track.
