## Michelin Motorsport Technical Bulletin

### TCR Tire Specification Change

Michelin has produced a revised construction of the 27/65R18 tire for use in TCR. For the September race at Michelin Raceway Road Atlanta, this new tire, designated S9M+, is to be used for the front axle positions in TCR. The standard S9M will remain as the rear tire fitment for TCR at MRRA during the September event with the tire allocations evenly split between S9M+ and S9M.

Note, used S9M+ tires may be rotated to the Rear axle.
