Re: Mandatory ADR Firmware Update: GTP, LMP2, GTD-PRO, GTD

---

The MoTeC Accident Data Recorder (ADR) firmware will be updated to version 1.0.7 at the Watkins Glen Event. This update includes a modification to the start sequence for initialization.

The update is mandatory and will be performed during pre-event Technical Inspection. ADRs must be brought to Technical Inspection so the units can be flashed and verified. If the device is not directly accessible when mounted in the car, it must be removed to be updated.

Spare ADR units must be presented alongside the primary units, as all spares must be updated to the latest firmware version.

Bosch will apply a sticker to each device once it has been successfully updated.
